

Trolley Mixer

STB-75L [STB-00750000CHK]

Staring mixing cart with a 75L plastic bucket, specially designed for the application of floor leveling compound.

This model of mixing cart makes it easy to handle many smaller tasks where a piping system is preferred over a tub mixer or forced mixer.

The mixing cart can be used with a bracket, easily mounted on the edge. This special bracket is used for the fixed installation of piping. Once the piping is installed, you can easily and effortlessly create your mixtures in an ergonomically correct position, without shoulder strain.

With the special bracket, the piping can be secured during application.

When the correct whisk is used on the piping, uniform and smooth mixtures are achieved without lumps.

Subsequently, the cart is easily transported to the task, where the cart is designed to tip and apply the material effortlessly.

Trolley specifications:

- Gross volume 75 liter
- Type of Mixers Most Types
- Total weight with Tub 7,5 kg
- Diameter of Tub 440 mm
- Height of Tub 630 mm
