

Conveyer Belt

STT 3.0 m. [STT0300230CHK]

STT 4.5 m. [STT0450400CHK]

STT 6.0 m. [STT0600400CHK]

Recommended for use with:

- Gravel
- Concrete
- Soil
- Rubble
- Sand
- Mortar

Example of use:

In basement excavations with narrow access or other hard-to-reach areas
Filling mixers.

Staring conveyer belt for many tasks.

The conveyer belt comes with a transport cart, and due to the belt's low weight, it is incredibly easy to handle. Using the lifting handles at both ends, the belt can be easily positioned. Special brackets for attaching to pan mixer lids are also available. The construction of aluminum profiles makes the belt one of the lightest on the market. Additionally, the specially designed profiles provide a very sturdy structure.

When using a loading box, it's easy to fill the conveyer belt, and it operates at a height of only 40 cm.

Cleaning the belt is almost eliminated. Along the sides of the belt, a felt edge is attached. This felt edge seals tightly to the rubber belt, preventing material from being pulled underneath the belt. The belt also operates without disruptive rollers, running instead on a smooth stainless steel plate.
